

Characteristics

A reliable structure

Document library, checkout, back-office, middle-office, front-office, Portfolio Management, compliance, risk management, CRM.

Software customisation and continual development

The interface swift is used to manage payments, changes and financial deposits (Alliance). An interface is also available with external financial providers for recuperating master data, prices and changes (Bloomberg, Telekurs). Finally, there is interface with corresponding banks for account reconciliation and another for statistics and control with the BNS (Fimis, Fire, FiTax-EU, FiTax-QI, FiTax-Recon).

Conformity with standards

Data is protected through user access rights, which conform to your organisational structure. Moreover, Arbasys allows you to monitor, in real time, both whether the operative contractual limits are being respected and if operations are being conducted according to the client's.

User friendly

Arbasys is currently used by banks in several countries thanks to its structural characteristics, which allow the software parameters to be easily adjusted.
